

FUGITIVE DUST CONTROL ANNUAL REPORT
FORMER FRANK E. RATTS GENERATING STATION

JANUARY 7, 2026

Pursuant to 40 C.F.R. §257.80(c), the owner or operator of a Coal Combustion Residual (CCR) unit must complete an annual Fugitive Dust Control Report. The first of these reports must be completed no later than 14 months after placing the initial CCR Dust Control Plan in the facility's operating record in accordance with 40 C.F.R. §257.80(d). Subsequent Fugitive Dust Control Reports are due within one year of the previous report.

This report satisfies these requirements for the legacy surface impoundments at the former Frank E. Ratts Generating Station.

The annual Fugitive Dust Control Report must address the following three items:

Description of the action taken by the owner or operator to control CCR fugitive dust

- Hoosier Energy adhered to the Fugitive Dust Control Plan, dated November 8, 2024. Specifically weekly inspections were conducted that included an assessment of fugitive dust conditions. Also a water truck was utilized when work was being performed in and around the impoundments.

Record of all citizen complaints

- No citizen complaints have been received in the previous 14 months.

Summary of corrective actions taken

- Not applicable
