

Wheeler Creek To Kays Transmission Line Project

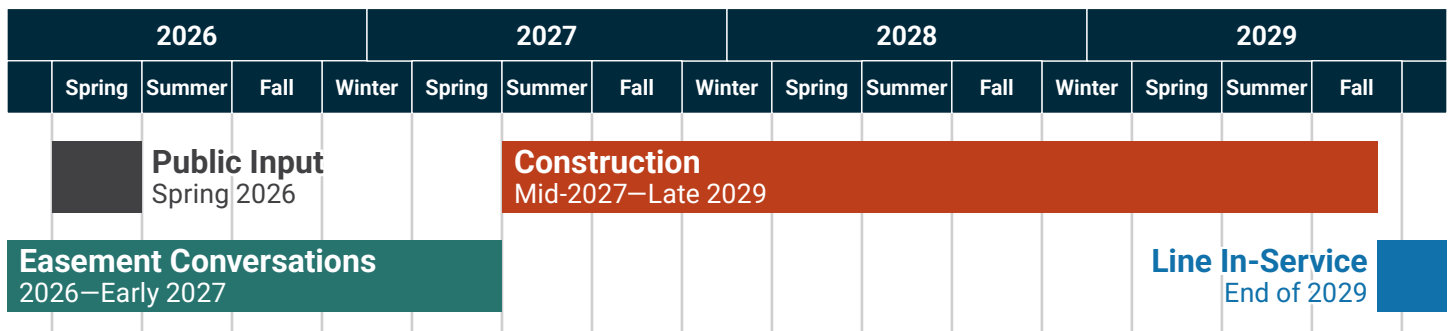

Project Background

Hoosier Energy’s Wheeler Creek to Kays Transmission Line Project supports the rebuild and upgrade of approximately 28 miles of transmission line between the Fairfield South Substation and Wheeler Creek Substation. The project includes efforts to enhance system reliability and improve operational efficiency.

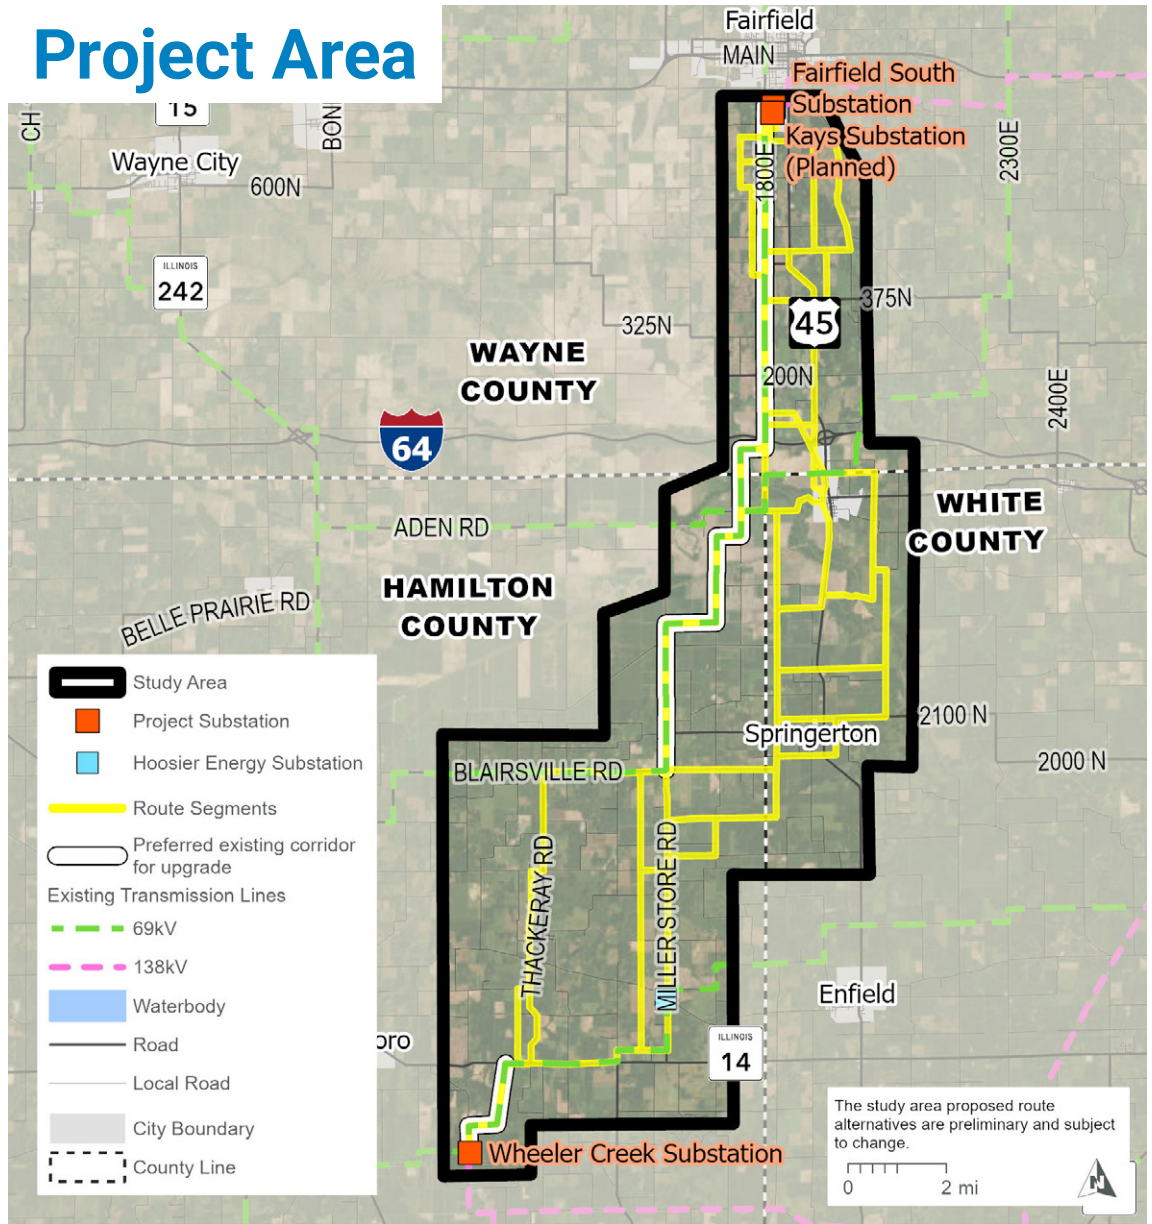

This project will:

-  Help reduce electric outages for homes.
-  Improve system reliability in Southern Illinois.
-  Provide more capacity to support growth in the area.
-  Increase overall safety in the system to meet today’s standards.
